SUMMARY

AI Engineer building production LLM and agent systems — RAG, orchestration, tool use, and evaluation — across Python and TypeScript stacks (FastAPI, Next.js, PostgreSQL). Experienced shipping AI features end to end for real users and iterating on live usage, with hands-on work on SOC 2 / HIPAA compliance readiness for sensitive-data products.

EXPERIENCE

BrainBoxAutomations

January 2025 – Present

AI Engineer

- Built **Kimport AI Sales Assistant** — an AI-powered sales automation system monitoring 4 Gmail inboxes, generating contextual reply drafts using hybrid retrieval (BM25 + dense vectors via Qdrant) and LLMs (Gemini/Claude), with stalled-client detection and executive analytics.
 - Developed **Halil RAG Chatbot Microservice** — a production-grade RAG API with FastAPI, LangGraph-based query routing, LaBSE multi-language embeddings, and layout-aware document ingestion (PDF, TXT, PPTX) via Docling.
 - Built **Anti-Fragility Coach** — a multi-modal RAG system using Gemini 2.5 Flash, Claude Sonnet 4.5, and Qdrant on Amazon EC2, embedding 600+ documents with gemini-embedding-001 for context-aware coaching recommendations; iterated on prompt and retrieval quality using feedback from 75+ beta users.
- Skills:** Python, TypeScript, FastAPI, Qdrant, Gemini, Claude, LangGraph, Docling, LaBSE, Make.com, Google Sheets API, GCP, Amazon EC2

Luminogics

January 2025 – October 2025

AI Engineer

- Fine-tuned the LLaMA 3 8B model on 10K Alpaca samples using supervised PEFT training (Hugging Face Transformers) on dual T4 GPUs, improving response quality and aligning the model to behave like an instruct-style assistant.
 - Developed an LLM-powered financial analysis module that processes financial data (MCA scores, average monthly profits, statement summaries) to generate insights on revenue trends, cash flow, debt obligations, and risk indicators, with FastAPI as the backend.
 - Worked on an agentic summarization system for large-scale medical documents, extracting insights from PDFs exceeding 1,000 pages.
- Skills:** Python, TypeScript, Next.js, FastAPI, OpenAI, Claude, DeepSeek, Vercel, Software Development

Octopus Digital Ltd.

July 2024 – December 2024

Trainee Software Engineer

- Developed a GenAI app for ad-hoc data analysis, focusing on user management, time-series forecasting with AutoTS, and integration with Azure OpenAI for enhanced insights.
 - Worked on a Document QA solution using Azure OpenAI Assistants, displaying relevant references with page numbers and providing user-friendly document views.
- Skills:** Python, Flask, Azure Function App, Azure Web App, Docker, Time Series Analysis, AI Research

PROJECTS

Ember — Enterprise AI Agent Platform | *TypeScript, Python, FastAPI, Next.js, PostgreSQL, Redis, OpenSearch, Celery, Docker*

- Contributing to an enterprise intelligence platform of persistent, governed AI agents (meetings, tasks, relationships, projects) with evidence-backed chat and retrieval, built on FastAPI, Next.js, PostgreSQL, Redis, and OpenSearch, including agent evaluation and regression tooling.
- Driving vulnerability remediation across the monorepo to support SOC 2 and HIPAA compliance readiness (via Vanta) — dependency auditing and security hardening for sensitive-data workloads.

Kimport AI Sales Assistant | *Python, FastAPI, Make.com, Qdrant, Gemini, Claude, Google Sheets API, GCP*

- Built an AI-powered sales automation system for 4 sales employees + 1 executive, monitoring Gmail inboxes to generate contextual reply drafts using hybrid retrieval (BM25 + dense vectors via Qdrant) and LLMs (Gemini/Claude).
- Built an evaluation and analytics pipeline measuring AI draft adoption, response times, activity classification, and conversion outcomes per employee — closing the loop between LLM output and real-world usage; implemented a stalled-client detection engine.
- Developed a lightweight executive chat UI enabling the CEO to query sales data in natural language, backed by Google Sheets integration and FastAPI on a self-hosted GCP VM.

Halil RAG Chatbot Microservice | *Python, FastAPI, LangGraph, Qdrant, Docling, LaBSE, OpenRouter*

- Developed a production-grade Retrieval-Augmented Generation microservice with FastAPI that ingests PDF, TXT, and PPTX documents and provides intelligent query routing with streaming responses.
- Implemented a LangGraph-based 4-node workflow (Classification → Route → Retrieval → Generation) with LaBSE multi-language embeddings (100+ languages) and Qdrant vector search for context-aware answers.
- Built layout-aware PDF extraction using Docling with automatic table detection, charset-aware TXT processing, and per-slide PPTX extraction with speaker notes.

Anti-Fragility Coach — Multi-Modal RAG System | *Python, FastAPI, Gemini API, Claude API, Qdrant, Amazon EC2*

- Developed a multi-modal RAG coaching system using FastAPI with Gemini 2.5 Flash / 3 Pro and Claude Sonnet 4.5 / Opus 4.5, hosted on Amazon EC2.
- Embedded 600+ documents in Qdrant using a named-vector approach with the gemini-embedding-001 model for context-aware recommendations.
- Scaled and stress-tested the system for 150 concurrent users and deployed to production with 75+ active beta users, iterating on response relevance and tone from real user feedback.

Medical Chat Bot | *PyTorch, Hugging Face Transformers, PEFT, LLaMA 3, Supervised Fine-tuning, NLP*

- Fine-tuned the Med LLaMA 3 8B model on 10K instruction-following Alpaca samples using Hugging Face Transformers and PEFT, aligning it for medical chatbot interactions.
- Deployed the model on Hugging Face Spaces using llama-cpp-python for optimized inference on an NVIDIA T4 GPU.

MedLegal Document Summarization System | *Python, Azure OpenAI, Azure Custom Document Classifier*

- Built a MedLegal document summarization system using Python, Azure OpenAI, and Azure Custom Classifier to condense 1,000+ page medical files into 40-page summaries for doctors.
- Automated document segmentation and summarization, improving review efficiency and handling complex medico-legal document structures.

EDUCATION

National University of Computer and Emerging Sciences

June 2024

Bachelor of Science in Computer Science

Lahore, Punjab

- Relevant coursework: Data Structures and Algorithms, Probability & Statistics in CS, Bioinformatics, Linear Algebra, Artificial Intelligence (Python), Information Retrieval, Massive Mining of Datasets.
- Achievement: Dean's List of Honor — Fall 2023.

CERTIFICATIONS

- Microsoft Certified: Azure AI Engineer Associate (AI-102)
- Hugging Face: AI Agents Fundamentals
